

# Diplomado\_Cloud\_Native

Se crearon las 3 VM con sus pares de llaves y se configuraron los puertos de seguridad para poder acceder a las VM desde el exterior.

## Aplicando Ansible

En el entorno de ejecución de ansible, será aquella máquina que se configura la instalación de ansible así como también el gitlab-runner para el acceso de gitlab.

Pasando por esta configuración se edita el archivo `/etc/host` agregando las máquinas de aws que utilizaremos para agregar:

```

## CONFIGURACION SSH

Para la configuración de ssh se debe de generar una llave ssh en la máquina de ansible y copiarla a las máquinas de aws para poder acceder a ellas sin necesidad de contraseña.

## Configuración de ANSIBLE

creamos el playbook y con el comando siguiente lo hacemos correr

ansible-playbook playBook.yaml
